### QUESTION 1

You are the administrator of the Microsoft Enterprise Project Management solution for GlobalTcert .com. GlobalTcert .com uses Microsoft Project 2000. All project managers save their projects in a Microsoft Office Access 2003 database. The project Server 2003, Views Processing, and Session Management on GlobalTcert

A. You install Microsoft SQL

Server 2000 and analysis Services on GlobalTcert B.

You must migrate all projects to the Project Server database by using the least administrative effort.

What should you do?

(Each correct answer presents part of the solution. Choose two.)

A. Import all resources by using the Import resources to Enterprise function in Microsoft Office Project Professional 2003.

B. Import all resources by using Data Transformation Services on the SQL Server.

C. Import all projects by using the Import projects to Enterprise function in Project Professional.

D. Save all projects to .mpp files by using Microsoft Project 2000. Open the .mpp files. Save the the .mpp files to Project Server 2003 by using Project Professional 2003.

Answer: A, C

---

### QUESTION 2

You are the administrator of the Microsoft Enterprise Project Management solution for GlobalTcert .com. GlobalTcert .com wants to use Microsoft Office Project Server 2003. You plan an initial configuration with Microsoft SQL Server 2000, Analysis Services, Project Server, Session Management, and Views Processing each installed on an individual server. You initial configuration is designed for 500 users. You expect a rapid growth of up to 3000 users of the Enterprise Project Management solution. You want to be able to add additional computing capacity as needed.

You have to install the components so that additional server capacity can be added without interrupting computer functioning.

What should you do?

A. Install SQL Server on a single server in a load balancing cluster. Add an additional SQL Server server as needed.

B. Install Project Server on a single server in a load balancing cluster. Add an additional IIS as needed.

C. Install Views Processing on the Session Management server. Start the service as needed.

D. Install a database for the Analysis Services repository on the SQL Server. Migrate the repository as needed.

Answer: B

---

### QUESTION 3

You are the administrator of the Microsoft Enterprise Project Management solution for GlobalTcert .com. GlobalTcert .com plans to use Microsoft Office Project Server 2003 to manage 800 projects. Management requests that these projects be updated every two to three days. The data for Portfolio Analyzer views are updated every night. You anticipate a high workload during the OLAP cube creation. You can use an existing server that runs Microsoft SQL Server 2000. You plan to set up GlobalTcert A for Project Server, GlobalTcert B for Analysis Services, and GlobalTcert C for Views Processing and Session Management.

You need to prepare the servers so that OLAP cube creation functions properly in your Enterprise Project Management solution.

What should you do?

(Each correct answer presents part of the solution. Choose two.)

A. Create an identical user on both GlobalTcert A and GlobalTcert B. Add the user to the OLAP

Administrators group on GlobalTcert B.

B. Create an identical user on both GlobalTcert B and GlobalTcert C. Add the user to the OLAP Administrators group on GlobalTcert B.

C. Install Microsoft Active Data Objects on GlobalTcert B.

D. Install Microsoft Data Access Components on GlobalTcert B.

E. Install Microsoft Decision Support Objects on GlobalTcert A that runs Microsoft Project Server and on GlobalTcert C which runs Views Processing.

Answer: B, E

---

#### QUESTION 4

You are the administrator of the Microsoft Enterprise Project Management solution for GlobalTcert .com. GlobalTcert .com network consists of a single Windows Active Directory domain connected to the Internet. You install IIS on GlobalTcert

A. You install the Enterprise

Edition of Microsoft SQL Server with Analysis Services and all service packs on GlobalTcert

A. You implement Microsoft Office Project Server 2003 on GlobalTcert B.

Project managers publish projects to Project Server. You build an OLAP cube and create Portfolio Analyzer views. The executive staff asks that an external customer be given access to the Portfolio Analyzer views. You create a Project Server account. You add the account to a category that has permission to see Portfolio Analyzer views.

What should you do next?

A. Add the customer's account as a local account on GlobalTcert A that is a member of the Remote Desktop Users group.

B. Edit the connection string for each Portfolio Analyzer view to connect to the Analysis Services server by using the HTTP protocol with a local user account on the Analysis Services server.

C. Create a Customer group in Project Server and in Active Directory. Add the customer to the Active Directory group. Synchronize the Customer group with the Project Server group.

D. In Analysis Manager for GlobalTcert A, create a new Role and make Guests a member of that role. Then select The MSP\_PORTFOLIO\_ANALYZER cube.

Answer: B

---

#### QUESTION 5

You are the administrator of the Microsoft Enterprise Project Management solution for GlobalTcert .com.

You install Microsoft Office Project Server 2003. You install Microsoft SQL Server 2000 and Analysis Services on GlobalTcert

A. You install Microsoft Windows

SharePoint Services on GlobalTcert B. You install Project Server, Views Processing and Session Management on GlobalTcert C. GlobalTcert .com uses Microsoft Windows SharePoint Portal Server on GlobalTcert D. Users want to search the content of existing document libraries on their corporate internet within their project Windows SharePoint Services site.

You have to configure the servers so that the indexed content of the corporate network can be searched by keywords.

What should you do?

A. Run SQL Server Enterprise Manager on GlobalTcert

A. Select the Windows

SharePoint Services content database for Project Server. Run the Full-text indexing wizard.

B. Run SharePoint Central Administration on GlobalTcert C. Enable the Full-text search and index component.

C. Connect Project Serve to the SharePoint Portal Services on GlobalTcert D.

D. Enable and start the Indexing Service on GlobalTcert B.

Answer: C
